

DESCRIPTION

Supravent® C70 series exhaust hoods are designed to cover the needs of commercial kitchens that require efficient solutions for filtration and extraction to create the most comfortable and smoke-free environment.

Supplied for wall or central installations Supravent® hoods are specified and manufactured to adapt to all site constraints such as beams, columns, etc.

The **C70-PC series** hoods are equipped with internal exhaust plenum and dampers allowing the adjustment of the exhaust flow along the hood, either to even the exhaust whenever the duct is placed on one side or to increase the flow where the most demanding cooking appliance is located. Equipped with filters placed at the periphery i.e. where the operator/cook stands, this configuration increases the capture efficiency for wall hoods over large appliances, such as ovens, while for central hoods, it improves the overall aesthetics.

Like other compensating hoods the C70-PC series allow the make-up air to be introduced into the kitchen through the hood itself, avoiding the installation of ceiling grills and their corresponding ductwork.

Application	Wall or ceiling mounted for use over any type of cooking equipment such as ovens, griddles, fryers, ranges, etc. in kitchens of any size. The wall model is ideal for ovens and large cooking appliances placed against a wall.
Technical characteristics	• Fully compliant with European standard EN 16282-2:2017 • Sheet metal thickness: 1.5 mm • Fully welded and polished (robust and completely watertight) • Constructed in a single piece up to 6 meters in length • Manufactured entirely from type AISI 304 stainless steel • IP 65 heat and moisture resistant luminaires (optional) • Rounded edges (maximum hygiene and elegance) • Extraction plenum chamber (with regulation dampers)
Optional features	• Decorative cladding • Demand Control Ventilation • UV-C reactor • Fire Extinguishing System • Smoke Control System

DIMENSIONS

Width (W)	Depth (F)	Height
1000 - 6000	1200 - 2400	700

CONFIGURATIONS

C70-PC Wall

C70-PC Central

For exact full technical information: dimensions, weight, power requirement, etc. see workshop drawing.

Additional technical considerations

70 mm
Optional drain cap
